AUDIT TYPE:

Announced Audit

AUDIT EXECUTIVE SUMMARY:

Melon packing operation, which works during the months of November to May approximately, there are about 253 employees to carry out the different tasks in the packaging of the product. In the plant, water from a well is used for cleaning the facilities, personnel operations and for washing the product. At the time of the inspection, the Honey Dew melon packing process was observed, which begins with the unloading of the product in a washing basin with recirculated water, goes through a belt elevator, brushing and the application of chlorine by spraying with water from a single step, application of peracetic acid (80-100 ppm) with water in a single step, product classification, rejection, transport by band, drying by fans, distribution by bands, packing table, packing in cardboard boxes, placement of PLU, pallet assembly, cold storage and distribution in containers. The water in the product washing basin is changed daily, and sanitizer concentration measurements are taken every hour. There is an established HACCP plan, the stage of washing the product by immersion has been identified as PCC 1 (100-150 ppm CL) and brushing + washing by spraying as PCC 2 (150-250 ppm CL). Preventive control program, which includes control of suppliers (raw material) throughMicrobiological analysis of the finished product, sanitization control (contact and non-contact surfaces) and process control records, product sanitization in washing tubs and brushes

Addendum(s) included in the audit:

U.S. FDA FSMA Preventive Controls for Human Food.

Product information for each product			
Product Group/Product Name	Observed Product	Seasonality	Country of destination for product
Honeydew Melons	Observed on the day of audit	From: November To: May	United States
